Kicad

git@github.com:develone/kicad-project-1.git

proto-type

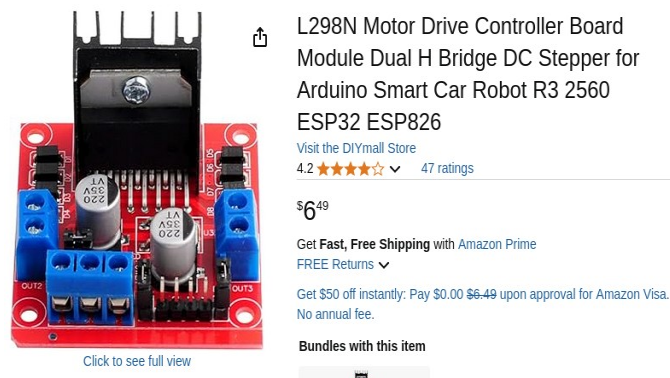

L-298

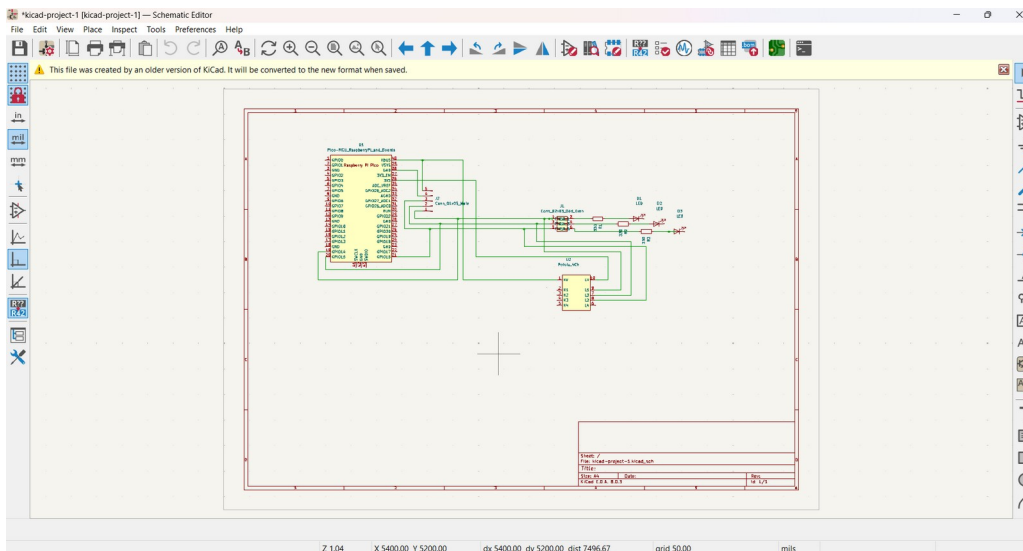

About this item

- L298N as main chip, low heat, outstanding anti-interference performance
- High working power to 46v, large current can reach 3A MAX and continue current is 2A, power to 25w
- Can drive one 2-phase stepper motor, one 4-phase stepper motor or two DC motors
- Built-in 78M05, get power from drive power, however, when drive power over 12V, please use the external 5v power as power supply
- Large capacity filter capacitance, afterflow protection diode, more stable and reliable
